PROFILE SUMMARY

Full-Stack Developer (MERN) specializing in real-time systems, secure authentication, and scalable backend architecture. Experienced in building and deploying production-grade web applications using React, Node.js, Express, and MongoDB, with strong fundamentals in DSA and System Design.

EDUCATION

B.Tech in Computer Science and Engineering

2023 – 2027

Noida Institute of Engineering and Technology (NIET), Greater Noida | CGPA: 8.70

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, TypeScript

Frontend: React.js, Redux Toolkit, Tailwind CSS, React Router, Vite

Backend: Node.js, Express.js, Socket.io, REST APIs, JWT Authentication

Databases & Cloud: MongoDB, PostgreSQL, Appwrite, Docker, Vercel, Render

Tools: Git, GitHub, VS Code, Postman, Linear

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks, System Design

EXPERIENCE

Software Development Engineer Intern | Hexaclimate Solutions Pvt. Ltd., Gurugram

Feb 2026 – Apr 2026

- Authored 22-page technical documentation for a web-based Land Management System, detailing system architecture, data flow, and 13+ product modules for cross-team reference.
- Performed API validation using Postman and analyzed backend workflows and production code, collaborating with developers to troubleshoot data-flow issues and verify fixes across 4+ core modules.
- Built structured test suites and defect reports, driving quality improvements across Tracker, GIS Mapping, Dashboard, and Project workflows through enhancement recommendations.

PROJECTS

CollabBoard | Real-time Collaborative Whiteboard

MERN, Socket.io

Live | GitHub

- Built a real-time collaborative whiteboard using React, Node.js, Express, Socket.io, and MongoDB — enabling multi-user live drawing, persistent chat, and sticky notes with sub-100ms sync via WebSocket room-based broadcasting.
- Resolved a WebSocket race condition between canvas history delivery and React component mounting by implementing a canvas:request_history pattern, ensuring board state accurately replays for all new users on join.
- Integrated multi-provider AI diagram generation (Groq, Gemini, OpenRouter) with automatic fallback, auto-save debouncing after each stroke, and draggable/resizable image overlays for an interactive canvas experience.

Split-Pay | Secure Payment Settlement Platform

MERN, Stripe, TypeScript

Live | GitHub

- Engineered full-stack payment settlement app using Next.js 14 & TypeScript with multi-person expense splitting, Stripe integration, and JWT authentication.
- Implemented security layer with bcrypt password hashing, rate limiting (100 req/15min), audit logging, and idempotency keys to prevent duplicate payments.
- Deployed on Render with PostgreSQL (Neon), supporting dark mode, real-time updates, and payment webhook verification.

AlgoPrep | Interview Preparation Platform

MERN Stack

Live | GitHub

- Built a full-stack MERN interview prep platform with JWT authentication, bcrypt password hashing, and protected Express middleware across RESTful API endpoints for secure user-specific data access.
- Managed global state using Redux Toolkit with 4 async slices (auth, progress, notes, streak) via createAsyncThunk, cleanly separating API logic from UI components through a centralized fetch layer.
- Designed a MongoDB-backed DSA tracker covering 500+ problems across 11 topics with company-tagged FAANG questions and a backend streak algorithm using ISO date logic to prevent duplicate daily entries.

ACHIEVEMENTS & CERTIFICATIONS

- Winner – Web Development Competition (Web Recall), NIET — Led team to architect a responsive, interactive website evaluated on UI architecture and design fidelity.
- Solved 500+ DSA problems [LeetCode](#), [GeeksForGeeks](#) & [Codeforces](#) using java.
- Certifications — Java Fundamentals & ReactJS (Infosys Springboard).
